Summary

Data Engineer / Python Developer with 2+ years of experience building enterprise ETL/ELT pipelines, data integration services and large-scale migration workflows across Python, SQL, PySpark, Databricks, Delta Lake, Snowflake, GCS/ADLS and Kubernetes. Built hybrid bulk and incremental ingestion for Dynamics 365 and integrations across Salesforce, Oracle, SQL Server, SAP HANA and Snowflake, with a focus on data quality, reconciliation, reliability and performance.

Experience

Software Engineer I Jan 2025 – Present
Spectra Solutions *Kochi, India*

- Designed a hybrid Databricks load engine routing initial Dynamics 365 bulk loads to PySpark jobs and incremental syncs to a SQL warehouse, removing multi-day staging bottlenecks for tables with 60M+ rows.
- Built PySpark bulk MERGE pipelines on Databricks to parallel-read CSV exports from GCS and Azure ADLS, normalize schemas, deduplicate by primary key, handle soft deletes and MERGE into Delta Lake (Unity Catalog).
- Applied Spark performance techniques including Adaptive Query Execution (AQE) and skew-join handling for large-scale processing.
- Integrated the Databricks Jobs API with Python/Kubernetes workers to provision notebooks and compute, submit and monitor runs, and report row counts to the GKE-based orchestrator.
- Operated batch workloads on GKE using Celery workers, Redis-backed queues, KEDA autoscaling and per-pipeline worker isolation.
- Designed and maintained DataSyncher ETL/ELT integrations across Salesforce, Dynamics 365, Oracle, SQL Server, SAP HANA and Snowflake.
- Designed PostgreSQL schemas and optimized SQL queries and workflows, reducing processing latency by 35%.
- Implemented validation, retries, error handling, automated recovery, monitoring and job-status tracking to improve pipeline reliability.

Junior Software Engineer Feb 2024 – Jan 2025
Spectra Solutions *Kozhikode, India*

- Developed Python services supporting enterprise ETL workflows, data processing and automated data integration.
- Designed PostgreSQL schemas and optimized SQL queries for enterprise datasets; built REST APIs for secure integration between enterprise applications and data-processing services.
- Implemented Docker deployments and CI/CD automation, and supported production troubleshooting and pipeline debugging.

Projects

DataSyncher – Enterprise Data Integration Platform | *Spectra Solutions*

- Worked on a metadata-driven ETL/ELT platform integrating Salesforce, Dynamics 365, Oracle, SQL Server, Snowflake and SAP HANA, with incremental sync, validation and reconciliation.
- Supported GKE batch orchestration using Celery, Redis, KEDA autoscaling, Cloud Build deployments and isolated per-pipeline worker pods.
- Built a PySpark bulk-load workflow: Kubernetes workers land Dynamics CSV exports in GCS/ADLS, trigger Databricks Spark jobs and MERGE results into Delta Lake.
- Contributed retry and recovery mechanisms, job-status tracking, Unity Catalog external-location setup and pipeline-run monitoring tools.

MigCockpit – Enterprise Migration Platform

- Built data migration pipelines from Oracle and SQL Server to SAP HANA, with schema mapping, SQL optimization and parallel processing for large-scale migrations.
- Implemented validation and source-to-target reconciliation to verify migration accuracy and data integrity.

Education

APJ Abdul Kalam Technological University (KTU)
Bachelor of Technology in Information Technology

Technical Skills

Languages & Databases: Python, SQL, PostgreSQL, MySQL, Oracle, SQL Server, SAP HANA
Data Engineering: ETL/ELT, batch processing, incremental sync, transformation, validation, reconciliation
Big Data: PySpark, Apache Spark, Spark SQL, Databricks Jobs API, Delta Lake, Delta MERGE, AQE, skew-join handling
Cloud & Platforms: GCP, GCS, Azure Data Lake Storage (ADLS), Snowflake
Integration & APIs: REST APIs, Salesforce APIs, Dynamics 365 APIs, enterprise data connectors
Orchestration & Ops: Kubernetes, GKE, Celery, Redis, KEDA, Docker, CI/CD, monitoring, retries and recovery
Currently Learning: Apache Airflow, advanced SQL (window functions, CTEs), Spark execution and partitioning
